- Monday: Catch-up day -- more boolean and if examples
 - **No office hours from 4-5**
- Tuesday: **Assignment 1 due**
- Wednesday: string formatting
- Friday: while loops

Anonymous Feedback

If something works, it works. Please don't mark assignments based on whether the code is more or less "beautiful".

- At first, we'll be focusing on correctness ("is it right") and process ("did you think about it in an effective way").
- Later -- not just in this course but in later courses -- *doing it the right way* becomes far more important than simple correctness.
- "Doing it the right way" is related to issues like modifiability, reuse, reliability, and performance.
